PROFESSIONAL SUMMARY

Fullstack Engineer with 3 years of experience building React/Next.js products, from a founding-engineer role at a live e-commerce startup to data-dense dashboards for multi-tenant sportsbook platforms. Built RBAC and PostgreSQL Row-Level Security systems, owned the data layer of a Next.js back office, and built an on-demand image generation service that replaced pre-rendered S3 storage. Led a Tailwind v2→v3 migration that removed about 9,800 lines of legacy CSS.

PROFESSIONAL EXPERIENCE

Founding Frontend Engineer — QuiqOrder (Startup)

Nov 2024 – Present

- One of the founding engineers on an e-commerce and revenue-recovery platform for merchants. Live since March 2026 with **77** merchant accounts, **19** published storefronts, and **₦2.2M+** in merchant sales.
- Built the merchant dashboard (products, orders, sales metrics, subscription billing) and the internal admin portal using Next.js App Router, TypeScript, Tailwind CSS, Redux Toolkit, TanStack Query, React Hook Form, and Zod.
- Integrated Shipbubble logistics for delivery and order fulfilment. Contributed to the product rebuilds that led up to the March 2026 launch.

Frontend Developer (Full Time) — Sportsbook Back Office (SBE)

Sep 2025 – Sep 2026

- Owned the data layer of a Next.js B2B back office: Axios data fetching, shadcn/ui and TanStack Table, and Zustand state across high-density dashboards (player management, banking, bonus, risk, reporting) serving 6 betting businesses.
- Built the Aviata Partner Back Office; optimized API calls and added API-key management to the main back office. Built features on the legacy Nuxt/Vue back office and the Aviatax mobile web app.
- Led a Tailwind v2→v3 migration (~9,800 lines of legacy CSS removed). Resolved CORS and API integration issues, hardened impersonation-token handling, and fixed a Docker Compose healthcheck mismatch in production.

Backend Developer (Contract) — Matchkicks

Feb – Mar 2025

- Built a serverless image-generation service (Node.js, Sharp, AWS Lambda, Redis) that composites design layers into product mockups on demand as WebP.
- Replaced pre-rendered images stored in S3 with on-the-fly generation and Redis caching, cutting latency and S3 storage costs.

PROJECTS

Jirella Farm Management System — Next.js, Supabase, PostgreSQL, AG Grid, Docker | [Jirella Farms](#)

- Solo-built a modular farm ERP with 8 modules (poultry, catfish, feed mill, BSF, inventory, sales, accounting), used daily by 5+ staff.
- Designed RBAC mapping 10 staff roles to modules with PostgreSQL Row-Level Security; wrote idempotent SQL migrations and multi-stage Docker builds; server-side filterable AG Grid dashboards.

Deslop — *Next.js 16, Fastify, Playwright, Drizzle, PostgreSQL* | [GitHub](#)

- Design-system extraction tool: crawls any live URL with Playwright, clusters colors with CIEDE2000, snaps spacing to an 8pt grid, and outputs design.md, a Tailwind v4 theme, and .cursorrules for AI coding tools.
- Added an AST sanitizer that snaps hallucinated hex codes from LLM output back to the verified palette, with a deterministic fallback when the AI is unavailable.

SBE Affiliate & Attribution Portal — *Next.js 14, TypeScript, Zustand, SWR, Radix UI, Zod*

- Built the full frontend of a multi-tenant affiliate and attribution platform: 3-tier RBAC, silent JWT refresh, tenant isolation, and server-paginated views over large activity logs.

TECHNICAL SKILLS

Languages: *JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3*

Frontend: *React, Next.js, Vue 3, Nuxt, Tailwind CSS, shadcn/ui, Radix UI, TanStack Table, AG Grid*

State & Data: *Redux Toolkit, Zustand, TanStack Query, SWR, Axios, Zod, React Hook Form, REST APIs*

Backend & Cloud: *Node.js, Express, Fastify, Supabase (PostgreSQL, RLS, Auth), Drizzle ORM, Redis, AWS (Lambda, S3), Playwright*

Tools: *Git, GitHub, Docker, Postman, Vite, Vercel, Figma*

EDUCATION

B.Eng. Mechanical Engineering, Federal University of Technology, Akure (First Class, 4.65/5.00)

2024
